DETAILED ACTION

Claim Objections

1. Claim 4 is objected to because of the following informalities: the claim is followed by double periods. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 and 5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Fischer (US Patent # 6,039,340). Fischer discloses a structure for attaching a fabric sheet to a vehicle body in which the fabric sheet is attached to the vehicle body by inserting a threaded fastener (reference 7) through a hole (reference 9) of the fabric sheet (reference 5) and screwing the fastener into a fastening hole formed in the vehicle body (column 2, lines 1-5), wherein the structure comprises: a spacer (reference 11) positioned in the hole of the sheet, the spacer having a cylindrical portion (reference 17) inserted in the hole, the diameter of the cylindrical portion being smaller than the inner diameter of the hole, wherein the threaded fastener is inserted into the cylindrical portion, and wherein an end of the spacer is in contact with the vehicle body and another end of the spacer is provided with a flange (reference 13) having a diameter larger than the inner diameter of the hole. Wherein the flange is integrally formed with the cylindrical portion. Wherein the spacer includes a spacer rear body to be in contact with the vehicle body and a spacer front body to be connected with the spacer rear body, wherein the spacer front body

Art Unit: 3641

includes the flange, and the spacer rear body includes an enlarged portion (reference 15) larger than the hole, the enlarged portion being located between the vehicle body and the fabric sheet.

Wherein the opening in the fabric sheet is located in an edge portion of an airbag that is intended to protect a vehicle occupant's head (reference 1).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fischer as applied to claims 1 and 3 above, and further in view of Davidson (US Patent # 5,564,739). Although Fischer does not expressly disclose the spacer including a tacking member for tacking the spacer rear body to the vehicle body so that the tacking member engages with an engaging hole in the vehicle body, Davidson does. Davidson teaches a module for connecting an airbag cover to a vehicle body comprising an inflator plate (tacking member) that engages a hole in a vehicle body (reference 25) for ease of attaching the tab of an airbag to a vehicle portion for a side impact collision system. Davidson and Fischer are analogous art because they are from the same field of endeavor: vehicle airbag system. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the inflator tacking plate as taught by Davidson with the gas bag cover as taught by Fischer. The suggestion/motivation for doing so would have been to obtain a side impact restraint system that was easy to mount to the vehicle.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bauer (US Patent # 5,456,488), Hartmeyer (US Patent # 4,988,119), Skornicka et al. (US Patent # 5,395,152), Takada (US Patent # 4,720,147), Rickabus et al. (US Patent # 6,431,585), LeVey et al. (US Patent # 6,540,251), Anscher (US Patent # 5,775,859), and Welch et al. (US Patent # 6,508,486).
